Does anyone have any experience using either Wd_Frame or Wd_Drawtext procedures with PV-WAVE. Apparently they are used to draw buttons and menus on the screen to construct a graphical user interface. We are having problems with them because apparently the upgrade from PV-WAVE 4.0 to PV-WAVE 4.2 has somehow removed them from the libraries, and therefore they no longer work. If anyone has any experience with the Wd_Frame or Wd_DrawText commands, I would appreciate any information regarding how to go about reinstalling these procedures on our system.

Thanks.
