Hello,

Is it possible to simplify this line:

```
save, v1, v2, v3, v4, v5,...,v100, filename = 'xxx..sav'
```

by using something like this:

```
for j=1,100 do print, 'v'+strtrim(string(j),1)+''
```

... so I don't have to write down "v" a hundred times?

Thank you!
