Hello,

I just installed ENVI4.7/IDL7.1.1 in Ubuntu10.04 with the root user. I met two problems.

1. the IDL and ENVI help can not work. I can start IDL and ENVI in the terminal. But when I input '?' in the IDL or ENVI prompt, the online help browser can not show, and just like this:

```
IDL> ?  
% ONLINE_HELP: Starting the online help browser.  
IDL>
```

```
ENVI> ?  
% ONLINE_HELP: Starting the online help browser.  
ENVI>
```

2. IDLDE can not start with general user but it can work with root user. If I use the command: `sudo idlde`, it can start the IDLDE, and the IDL and ENVI help can also work well. However, when I just input: `idlde`, it can not start. The following is the error information:

```
lunwen@ubuntu:~$ idlde

```

I'm not familiar with Ubuntu and don't know how to solve these problems. Can anyone help me to solve these?

Thanks in advance!
