Hello-

I am wondering if anyone has written an editor for time series data.

Here's what I am talking about.

Display an array as a plot (plot,x) with perhaps a time axis (plot,time,x)

Be able to drag a rubber band box around a section of data and have that section re-plotted to fill the window. Then I would like to be able to select points with the mouse and be given choices as to what to do with the selected point(s).

Please let me know.
