
Subject: while loop crashes

I have been tried several times to run the following script in (by calling it through a .pro file) but it always causes it to crash. It seems simple enough, yet I can't figure out why it won't work.

```
print, 'start while loop'
j=2
while (j NE 10) do begin
  print,j
  j=j+1
  print, j
endwhile
```

```
print, 'done'
```

Thanks.
