Have you checked that ./xinstall has execute permission?

I have granted it execute permission using chmod, but I still get the
same error.

Can you run it as root?

Running as root still yields the same error.

Try 'bash xinstall'

regards,
lajos

Same result,as well.

It's probably worth noting that the line of code that's apparently

triggering this is as follows:
exec ./xinstall $INSTALL_DIR $DATA_DIR $DELETE_DATA

do you have read-write-execute privileges for those directories and
the files within them?
What are the values of $INSTALL_DIR, $DATA_DIR, and $DELETE_DATA?
Could they be weird directories with weird permissions, like belonging
to a user that made the zip file but that may not exist on your system?

Ok, fixed it- I had to give execution permission to the entire
directory (not just the script).

Just as a sidenote: the 'x' permission for a directory means that
the directory may be searched. It has nothing to do with executing
files. However, if one cannot search a directory, one cannot open
files in it, and what cannot be opened cannot be executed.
