Folks,

I'm slowly but surely starting to use itools. The part that i'm struggling with now is that i'd like to have an isurface with two surface plots in it (two views i'm assuming) such that if i take my mouse and rotate one of the plots, the other one is also rotated the same way. Is this easy to do? I can't seem to find anything in the properties dialogs or help file that gives me a hint.

Jeff
