I want to extract the following information(given below) from Landsat-5/7 TM/ETM+ files using IDL+ENVI program. I do not wish to do it manually using IDL+ENVI. I would appreciate your help.

Filename: images/exampleInpImage.img

File codename: inputimage

Start point:(x,y): 388, 663

Pixel center to pixel center distance:(x,y): 25, 25

Rotation: -6

Layer to use: 4

Ignore: 0

Filename: images/exampleReflImage.img

File codename: reflimage

Start point:(x,y): 464566, 4940595

Pixel center to pixel center distance:(x,y): 25, 25

Rotation: 0

Layer to use: 4

Ignore: 0
