Subject: How to exchange data in multi-top-level base widgets?
Posted by deerlux on Tue, 06 Jul 2010 15:07:32 GMT

Hi,

I'm tring to write a program with multi-windows. The main window is use
to display the main GUI, and the anthor windows used to input
parameters. The user data is loss when the child windows is destroyed.
How can I transfer the data from child window to main window when the
child window is destroyed?

Thanks a lot.
