
Subject: Slider Widget: Dimming the # value

I have a low-level widget question for you. When I "De-sensitize"/"Sensitize" a slider, the label dims/undims but the # representing the current value does not change. Is there a way to force the #value to dim/undim as the label does? Users say that the slider still appears to be "on" because the #value does not dim. Anybody out there know how to fix this?
