I'll again go through a few of the new features of the release on my site. The first topic is the new list and hash types:

http://michaelgalloy.com/2010/07/22/idl-8-0-lists-and-hashes .html

I cannot download the new version for trial.

It seems that I must wait for the approval from ITT VIS.

But I do not know how long it will take.

Is there anybody who has downloaded it and is using it?

Best regards, idu

Download works fine. I've not been sent my new license yet, so it only lasts 7 minutes, /but/ at least I can leave it running with the "you have run out of time" dialog up while reading through as much of the Help on the new stuff as I want.

Pete.

I'm still waiting for approval to download 7.1, which was submitted on the 21st May. So don't hold your breath. I emailed ITTVIS to report the problem, they said my account was now fixed and I would be able to download. Wrong, it still requires approval, and I'm still waiting...

Thanks for your write up!

It really takes 15 seconds to add 200 elements to a hash list???? [based on your final chart.]

Craig

Ah, that's 200K elements. Post is updated, with source code for timing and creating graph.

I get that error also when I try to download IDL (not just 8.0, it happens frequently). Trying again, switching between updating and evaluating, etc, seems to get it to work.

Very cool.

I do wonder why the overloading syntax is implemented like so: function mgffhdf5file:: overloadBracketsRightSide, rather than something like function mgffhdf5file:: overload[], ?

Is there a BracketsLeftSide overload option? If so, that could have been function mgffhdf5file::_overload[]=,

Similarly for the usual operators. Why function myclass::_overloadPlus, left, right instead of function myclass::_overload+, left, right?

(and, yes, I am thinking of the ruby way).

Given the fact that there is an "_overload" prefix, I would've thought it easy to correctly parse everything between

that and the next "," to correctly interpret the operator or operation to be overloaded.

BTW, does IDL 8.0 have the ability to create user defined operators?

cheers,

paulv

The new Workbench:

http://michaelgalloy.com/2010/08/03/idl-8-0-idl-workbench.ht ml

I think there will be two more articles: the new graphics system and other language changes.

Here's the article on other language changes, i.e., negative subscripts, !null, automatic garbage collection, and other changes to object syntax:

http://michaelgalloy.com/2010/08/09/idl-8-0-other-language-c hanges.html
