
Subject: iTools problem with setting isotropic in 8.0

It seems that something changed between 7.1 and 8.0 that is not allowing a visualization to be isotropic in iTools.

My IDLitVisualization instance has /ISOTROPIC set, and this should force the entire view hierarchy to be isotropic. It does not.

Further, in the IDLITSYS_CREATETOOL function I have tried using no SCALE_ISOTROPIC keyword, which should default to zero for that variable, which should honor the /ISOTROPIC request in my visualization. I have also tried SCALE_ISOTROPIC=1, which should force isotropic scaling in any situation, and I have tried SCALE_ISOTROPIC=2, ANISOTROPIC_SCALE_3D = 1.0, which should trick the iTool into isotropic scaling. None of these worked.

Gosh I would hate to have to do a kludge like a transparent cube to trick IDL into thinking the Z range is the full range of the gridded data, instead of the spatial range of only the isosurface being plotted.

Hopefully this is me being bone-headed. If I figure this out in the near-term, I will 'fess up and explain the error.

Anyone else notice this behavior or have any advice?

Thanks.
Erik
