Hello,

I am wondering if anybody encounter similar problem.
Simple TV function in IDL 6.3 caused segmentation fault, core dumped
on my new fedora core 13 but works fine in fedora core 2.
I have tried creating a LD_PRELOAD_PATH to libX11 version that I know
works w/o error.

I think it is unfair to spend \$2500 for IDL 8.0 which apparently TV
function works fine.

thanks for your input.
