Subject: PLOTS and the new PLOT Posted by Gray on Sat, 21 Aug 2010 12:13:36 GMT

Hi all,

Can anyone tell me how the new PLOT() handles scalars/1-element arrays for X and Y? Or do you still have to use PLOTS?

If you have a graphic created with PLOT(/buffer), will a subsequent call to PLOTS go on the right plot? Or will it try to go in a window?

Thanks!
