Subject: iTools ISV problem
Posted by Kenneth P. Bowman on Fri, 27 Aug 2010 20:39:36 GMT

Hi all,

with ITTVIS, but I thought that someone here might have some ideas.

ISV files generated in IDL 7 and viewed in IDL 7 work fine.

causes the objects to stretch and rotate at the same time.

created in IDL 8 by using iSurface here

  http://csrp.tamu.edu/downloads/idl/test_rotate.isv.zip

If you select the freehand rotate tool and click on
the white space around the yellow surface, it seems to

and try to rotate, the whole rendering stretches in unexpected ways.

We have not been able to determine whether this is a problem with the ISV
files or possibly with changes made to the iTools in version 8.

To answer my own question:

ITTIS Support tells me that there is a bug in the iTools that will
be fixed in the next release.

The bug basically makes it impossible to use the freehand rotate
tool to rotate a visualization. (For me the 3-D rotation is the
main reason to use the iTools.)

I may be the only person who actually uses the iTools, but if you do, I recommend that you keep your IDL 7.1 installation until this bug is fixed.
