Yay! Are you going to tag a release? I only see a trunk directory in there.

The reason I ask is I would like to use the svn:externals property in my repository to link to a tagged release of yours. I don't like to link to the trunk since, well, it's the trunk and can change.

Woohoo! This is great. Really really great. I am going to advertise your repository URL here at work if that's o.k.

cheers,

paulv

p.s. For info on tagging see:

<http://svnbook.red-bean.com/en/1.5/svn.branchmerge.tags.html>

and for info on the svn:externals property and its use, see:

<http://svnbook.red-bean.com/en/1.5/svn.advanced.externals.html>

Yeah, as soon as I figure out how. ;-)

There are only so many hours in the day to Learn New Things, and I've been tied up lately with IDL 8 and Ubuntu. :-)

Cheers,

David

Well, if you decide on a naming convention, maybe some kind subversion-knowledgeable junior developer tennis set type could do it for you? I (or someone else in c.l.i-p) can write down the subversion commands for you to make it so.

Good luck with Ubuntu. :o)

cheers,

paulv
