Hi gurus,

I have a problem trying to open a SAV file with the virtual machine (IDL 7.0) on a MAC OS X (10.6.4).
When I open the file I get the error "The variable shellCmd is not defined".

If I try to run the SAV using the terminal, everything is alright..
The problem is only using the "double-clickable" icon.
Do you know what is happening ?
Thanks in advance,

nata
