Subject: idlwave w/ idl8?
Posted by Chad on Tue, 05 Oct 2010 20:06:50 GMT

Has anyone figured out a way to integrate the new help files for IDL8
with IDLWAVE?   The html displays just fine, but ITT changed the
directory structure from IDL6.4 (my previously installed version), so
IDLWAVE sends firefox the wrong path.

I haven't been able to locate any recent IDLWAVE posts in this group
or references to it online, so perhaps I just the last old dinosaur
still using it. If so, that would be sad.

Thanks,
Chad

I second this question (perhaps I'm another dinosaur), though I'm
looking more for updates that handle new syntaxs, like the foreach ...
endforeach and such like. Is any work being done on idlwave in this
regard?

JD?
