Folks (and Paul van Delst, in particular),

We have created an official "released" version of the Coyote and Catalyst Libraries in the public SVN repository. Users concerned with stability can download from the release versions. On-going development will continue in the trunk versions.

We don't currently have a release "schedule", but we expect 2-3 releases per year, as required.

You can learn more here.

<http://idl-coyote.googlecode.com/>

Cheers,

David
