
Subject: alternative to execute available?

Hi there,

I'm often using the `_extra` keyword in my routines together with a simple approach to give variables values, like this one

```
pro test_ex, _extra=ex
  for i=0,n_tags(ex)-1 do _=execute((tag_names(ex))[i]+'=ex.(i)')
end
```

If I would call this like: `test,/hello,d=dist(10)`

it would give me within the pro: `d` with the value `dist(10)` and `hello` with the value `1`

It works fine, but has one big limitation. I cannot use this technique if I would like to produce working binaries (sav-files). Is there any way to avoid the `execute` call without having information which keywords were passed to the `test_ex` routine?

Thanks and regards

CR

Subject: Creaso and ITTVIS - I am confused

I was excited about the announcement of ITTVIS buying Creaso to enhance support in Germany, Austria, Switzerland and Netherlands. I also hoped for a better pricing of products.

In the meantime the Creaso Homepage redirects to `ittvis.com` but if I try to find pricing information there, I am still referred to Creaso.

Does anyone know if pricing/pricing policy has changed?

Sincerely
Jan
