I doubt you want to contour that data. I suspect you probably want to partition the data into different colors so you can display it as an image. At least that's what I would do with that data. :-)

Here is an article that describes how to do that.

http://www.dfanning.com/code\_tips/partition.html

If you did want to try to contour it. Set your LEVELS keyword to the specific values present in the image.

Cheers,

David
