Subject: Forcing a background colour?

Can any one help?

I am new to IDL and I am plotting an image with the "map_image" comand
after seting the colour table using loadct 33. This gives me a dark blue
background to the rest of the window (i.e. where the image isn't), I would
like this area to be white. I have tried the keyword "background" and
various other things. Does anyone have any other suggestions please.

Thanks
        Tom
