Hi guys,

I have a RGB image [1024,1024,3] and I do:

```
-----  
set_plot, 'x'  
device, decomposed=1  
tv, image, true=3  
-----
```

The image is perfect. Then I do:

```
-----  
set_plot, 'ps'  
device, /color, bits=8, filename='example.ps'  
tv, image, true=3  
device, /close  
-----
```

The final PostScript file contains an image very different. The colors are not the same and I don't know why...
Any suggestions,

nata
