Hello,

I am a big fan of IDLWAVE and use it for all my development. Recently I moved to a new computer running Ubuntu 9.04, with GNU Emacs 22.2.1, and quite a few commands such as C-c C-v (to look up the source for the function or procedure near point) and M-TAB (general autocompletion) don't work. Instead, the modeline reads "Wrong type argument: consp, nil".

The *messages* buffer says:

Scanning all buffers...

idlwave-concatenate-rinfo-lists: Wrong type argument: consp, nil

Any ideas on how I can fix this?

Thanks!
Stevie

Some time ago, I needed to buy a good car for my firm but I didn't earn enough cash and couldn't buy anything. Thank God my comrade suggested to try to take the loans at trustworthy creditors. Therefore, I did so and was satisfied with my sba loan.
