Or, if somebody has a good way of combining astronomical images in IDL, that would probably be even better.

For an IDL solution I might look at the SIMPLE pipeline (<http://www3.asiaa.sinica.edu.tw/~whwang/idl/SIMPLE/index.htm>) and in particular the procedure mosaic_wide.pro. For a non-IDL solution (an alternative to Multidrizzle) I would check out SWARP (<http://www.astromatic.net/software/swarp>).

All of these solutions will have a steep learning curve, but I don't know anything simpler. --Wayne
