Subject: [3.6 help (? command) in 4.0?]

I'm used to using IDL on a VT100 with Tek 4010 capability, but find 4.0
less usable because the "?" help won't come up on my screen, since
it now exists only in X format. Perhaps RS will fix this eventually,
but in the meantime would it be possible for me to import the
MAN_PROC, etc., files from an older version and look at them as text
in 4.0? I understand that they would be somewhat incorrect, but few
of the simpler procedures have changed, and I'm willing to take the
risk.
