Subject: display the angstrom symbol to the power of -1 in a widget_label
Posted by Jean[2] on Fri, 12 Nov 2010 19:59:29 GMT

Hello all,

I'm building a GUI and needs to show the unit of a value a user needs
to define. I'm using widget_label and the unit is Angstrom^-1. I was
able to display the angstrom sign using string(197B) or even
string("305B) but can't manage to get the power -1. Any idea how I can
do that.

Thanks for the help

Jean
