Subject: idl bimodal distribution Posted by Giuseppe Papa on Fri, 19 Nov 2010 18:14:52 GMT

I'm trying to simulate a bimodal "randomn" distribution with the 2 peaks having the sigmas of 0.3 each for example and mean around -1.2 and -0.7...

Do you have any tips?

I've tried adding these below, but it doesn't work..., I get a unimodal distribution...

 $met_1a = randomn(seed, 100000)*0.3-1.2$

 $met_1b = randomn(seed, 100000)*0.3-0.7$

Can someone help?
