Subject: Re: Ending a code listing section with IDLdoc
Posted by Fabzou on Mon, 22 Nov 2010 14:33:54 GMT

Hi again,

I found out what the problem was: the indentation of my documentation
was not consequent. Note for myself: it is important to follow a strict
indentation in the file header, too.

Sorry!

I'm glad you found the problem. Yes, the rst format is very particular
to indentation: keep the indentation consistent and use spaces not tabs.

For those following along, the comment should look something like:

;   The structure is defined as::
;
;   {ABS_Date,
;   year: 0L,   Gregorian year
;   ...
;   }
;
;   More comments.
