
Subject: multiple entities in shapefile

Hello,

I am trying to write out a shapefile containing several entities. I am not sure if this is actually possible but I can't really understand why not.

Writing out just one entity works fine, but if I started repeating that process something goes wrong. The procedure complies and executes fine, but once I bring it in Arc it complains about not having "correct number of records"

Below the skeleton of my code, but if others have done this successfully?

Thanks!

```
shape=OBJ_NEW('IDLffShape', outname, $  
  /UPDATE, ENTITY_TYPE=3) ; type 3 for ployline
```

```
for i=0, n_files-1 do begin
```
