Dear all,

I have to read a large ascii file (2.5e+07 lines) into a 5000x5000 intarr. The code below works fine but it takes roughly 15-20min on my machine( not the oldest :) ). Any suggestions how to accelerate this?

CODE:

OPENR, unit, file, /GET\_LUN

```
result = INTARR(5000,5000, /NOZERO)
count=0d
WHILE (NOT EOF(unit)) DO BEGIN
  READF, unit, a,b,c,d,e,f
  print, count
  result(count) =FIX(f)
  count++
ENDWHILE
```

CLOSE, unit & FREE\_LUN, unit
