The release notes of 8.0.1 indicate this might have been fixed:

"60178

IDL 8.0 SAVE files that contain scalar and array byte
variables cannot be restored in previous IDL
versions.

You can now restore IDL 8.0 SAVE files that include scalar and
array byte variables in previous versions of IDL.

NOTE: Earlier versions of IDL may have problems restoring 8.0
SAVE files that include byte arrays greater than 2147483647
bytes."
