Subject: Read a file
Posted by Giovanna on Fri, 28 Jan 2011 14:50:59 GMT

Hello,

Me again....

I'm trying read two files and to save in other file. See my code:
http://pastebin.com/GRmNtags

I run a command restore, to restore the file .sav and .cnj.... and
then saved in 'data.dat' using 'printF'

Is this correct what I did in rows 16 to 23??

Thanks,

Then I see not point in trying to read file.sav and file1.cnj as text
files. Use only restore with them.

> Expression must be a structure in this context: MODELO.

That means that when you used help modelo was not in scope (or that it
is not a structure). Either use help at the point where you are trying
to use modelo, or get from wherever it comes from, before using help.
Your code makes it look like it comes from one of the savefiles. If
so, use help after restoring the file.

I don't understand. :(

Thanks,

What do you get if you do

restore,'file.sav',/verbose
restore,'file1.cnj',/verbose
help,modelo.imag,conjugado.imag

?

Giovanna, I think it is time for you to read
the following document, please take 10 minutes
and read all of it.

http://www.catb.org/~esr/faqs/smart-questions.html

After that, I suggest you make a new post describing
what is it that you are having problems with. Make the
post self contained and apply what you learned from
the link above.

I am sure that will enable people to give you
more useful information.

Ciao,
Paolo
