---

Folks,

My biggest headache are people who have 4-5 copies of the Coyote Library on their IDL path. :-)

I seem to remember someone on this group having a routine that could find multiple versions of a file in the IDL path. Does anyone remember that? I'm going to write it myself if I can't find it. I need some way to quickly debug this problem.

It would be nice if I could search for a particular file, say, "tvimage.pro," and find it everywhere. :-)

Cheers,

David
