Hi everyone

I have a problem which has only recently begun to occur on all 3 of my machines (windows XP) using both IDL 6.4 and IDL 7.1.
When I try to use H5G_GET_NMEMBERS the program just seems to fail giving me the execution halted message after printing something like "H5G_GET_NMEMBERS: : Object ID:201326624".
In IDL 7.1, IDL just closes.

Does anyone have any ideas why this is suddenly happening? It's causing me all sorts of issues trying to run some programs that I have acquired from others....

Thanks!

Hi hethomas,

I just got the same problem. Since that's an old post, I wonder if you found a solution?

Thanks
