Hi all,  
I'm looking for some help in labelling regions in space and time. I understand the fundamentals of using LABEL\_REGION in 2 dimensions, but i want to extend the labelling into a 3rd dimension, essentially so that i can track a group of connected components in time. Does anyone have any advice/tips?  
Thanks,  
Ian

Yes, please explain your goals more completely. It sounds like an interesting problem, and I'm sure we can help, but there is not enough information to give you any advice yet.
