Hi there,

I am trying to convert a bunch of old direct graphics programs to objects.

These programs are all called by a cronjob/script so work in the background (no interactivity or windows produced).

In essence they use this:

```
set_plot,'z'  
write_png .....
```

I now realize that I've never seen an example of object graphics working in a similar way - all object examples seem to be embedded in widgets and the like - based on human interactivity.

I assume I can do this in object graphics ? Does anyone have a simple example of how this is done ?

Cheers

George.
