Hi there,

I'm using David Fanning's VColorbar__define.pro under IDL 8.0
and it ain't working....
It works fine under 7.1I'm wondering if there is a problem
or if the problem is me ;o)

```
thisColorBar = Obj_New('VColorBar')
thisModel->Add, thisColorBar
```

gives me:

'Attempt to call undefined method Vcolorbar::position'

I do have a large viewport defined.... but no idea whether this would
cause a problem.....

```
thisView = OBJ_NEW('IDLgrView', Color=[80,80,80],
Viewplane_Rect=[0.,0.,1440.,900.],zclip=[20.,-10.])
```

...and like I say, works fine with 7.1

Any ideas ?

Cheers

George.
