Hi folks,

Is there a way to convert a matrix of points on a certain lat/lon grid to an another lat/lon grid ?

Right now, I am doing the projection taking the nearest neighbour points but I would prefer some kind of interpolation.

I can not use MAP_SET, MAP_PATCH, etc because my final lat/lon grid is not necessarily defined by one of the IDL projections.

I don't know if TRIANGULATE or QHULL could help in this case. I don't have any experience on this kind of things.....

Any help is appreciated,
natha
