
Subject: Command line display format

Hi, so I did this in the command line:

```
IDL> print, wave_special[2], wave_special[1], wave_special[2]-  
wave_special[1]  
    1260.20    1260.10    0.0999756
```

I was hoping it would print out 0.10 but it's something really close.

How can I display in my command line the actual values of wave_special. I know in Matlab you can type format short, format long, to do it.

Is using the print format the only way to see? Thanks!
