Dear All,

This is just a question.....

I can find for all previous versions of IDL and ENVI licence files, except the latst one. [perhaps an exception in some chenese blogs that they give a licence file that under certain modifications it works (although i havent check it i do not think it is working) but it has't all the modules of IDL-ENVI]

Any idea why this happens? What is the most probable scenario??

1. It is extremely difficult to crack it?
 2. no one bothers to crack it?
 3. Sonething else?
