Support for some additional NetCDF 4 data types appears to have been
added in IDL 8.1, including UINT64.

Hi,

I had to dig out this post. I have installed the IDL 7.1sdf patch to get the NCDF 4 features in IDL.

Is it possible to define a LONG64 variable with this patch? If it is, what is the keyword to use? I tried many keywords without success...

Thanks a lot!

Fab
