
Subject: pasting text in widgets under Mac OS X

Does anyone know how to use cut and paste from the operating system on Mac OS X into text widgets in IDL? For example, I have a text widget that accepts a wildcard string that is used for a file search. I'd like to be able to copy the wildcard string from a Terminal window and paste it into the text widget. I can't get the widget to accept the paste. Any clues?
Thanks.
