Subject: pasting text in widgets under Mac OS X

Does anyone know how to use cut and paste from the operating system on
Mac OS X into text widgets in IDL? For example, I have a text widget
that accepts a wildcard string that is uses for a file search. I'd
like to be able to copy the wildcard string from a Terminal window and
paste it into the text widget. I can't get the widget to accept the
paste. Any clues?
Thanks.
