Subject: LONG64 in NetCDF-4 files

NetCDF-4 allows various 64-bit data types in addition to DOUBLE,
but there is no /LONG64 or /ULONG64 keyword in NCDF_VARGET. (I
tried it and got an error message.)

Any idea why not?

I have been trying to learn some of the new NetCDF-4 features and it
has been, uh, an interesting experience.

It seems to me the post you quote speaks for itself. :-)

Cheers,

David

I had the slight hope that the sdf patch would allow all the ncdf features, because Ken didn't say anything about the patch... Quite disappointing, but thanks!
