Check out the LMGR routine. You would have to call it several times with
different keywords to determine your exact mode, .i.e. am I VM? am I
runtime? am I trial? etc.

That did the trick... Thanks. The network settings seem to have
gotten changed such that the license manager can't be seen and the
code runs in demo mode. Not surprisingly it's not quite a effective
this way.

Just looking at the account for the previous message. Next time I'll
know to check before posting after my daughter has been on the
computer!

Tell me about it! Coyote does this to me all
the time. :-(

Cheers,

David

P.S. Thought I would give you a quick update on my
"book tour". (I know you have been holding your
collective breaths about this.) Paul managed to
squeeze 75 poor souls into a room that held 35
for a talk at NOAA yesterday. Great fun!

I almost didn't make it though. When I got to
the rental counter to rent my car, I found Coyote
had replaced my driver's license with one that had
expired nearly a year ago. Yikes! I was suppose
to use that car to pick my wife up at the airport
and go to a wedding. Let's just say that while the
book business is on the upswing, my domestic life
is, uh, looking more and more like Coyote's. :-(
