Hi,
I want to use the new graphics system so badly, but I run into all these problems I am not used to. For example, I could not find a magnifying glass in the plot window in IDL 8.1. Isn't there a simple way to zoom into a plot? I tried mouse with usual key combinations (ctrl, shift, alt) to no avail. The post v6.4 help system has become so difficult to use that I have a hard time finding any of this information in the help system.

Please please please anyone help or let me know that I am asking for way too much...

Thanks,
Haje

One place it appears is the status bar of every Graphic when it is created.

Paolo,
I couldn't believe it when you wrote it, but it is truly hidden in plain sight. I guess my problem was being too busy mousing over the plot at which point this extremely useful help gets written over with coordinate info.

Thanks,
Haje

Just do not confuse me with Paolo, who also posts here frequently.

Sorry for the typo, shame on me.
