Dear All,

I would like to experiment with the following transforms
curvelets,
contourlets and
surfacelets

The problem is that the only code available i find is written in C or C
++. I am not a C user. I try to compile the codes but as you all can
imagine... C with all the libraries, libraries that depends on
libraries (find previous releases because the current dont work and so
on), header files you have to modify etc etc etc...Its at least for
me my worst nightmare... Any way i didn't manage to compile them.

I am wondering...why no one bothers to make just an exe file (for the
windows users) and give just a small description of the parameters
that the exe file uses....

Now if some one of you has experiment with any of the following
transforms I appreciate if he/she could give me some code..

Thank you in advance

P.S. Sorry for my poor english
