Subject: Red and Green Colors Swapped when Printing from Mac
Posted by Mostafa on Thu, 02 Jun 2011 22:31:34 GMT

Hello,

I am using IDL 8.1 on MacOSX 10.6.7. When trying to print a plot using
IDL Graphics, I noticed that the red and blue color components are
swapped on the printout. This happens for BARPLOT and CONTOUR.
However, the COLORBAR associated with the contour prints out
correctly. Also printing the window of IMAGE function also prints the
correct colors.

Anyone seen this problem and knows what causes it?

Thanks a lot
