Dear Ruoi

I've also asked for code on curvelet and contourlet transform, but no one answer. Probably no one has such piece of code (or if someone has he or she doesn't read this forum). On the other hand there is code for the transform in matlab (you already know this) and in C or C++ If you have good knowledge in c, c++ you probably be able to compile these pieces of code (personally i use windows, i am not a c, c++ programmer so i couldn't compile them. I also send e-mails to their authors if could compile their software for me , no one answer...)

If you use windows and you manage compile them or if you find some IDL code for these transforms, PLEASE inform me and assist me.

Thanks

Kostas.
